C;Species: Bacillus thuringiensis
C;Accession: 13938
E;Hefford, M.A.; Brousseau, R.; Prefontaine, G.; Hanna, Z.; Condie, J.A.; Lau, P.C.K.
J. Blotechnol. 6, 307-322, 1987
A;Title: Sequence of a lepidopteran toxin gene of Bacillus thuringiensis subsp kurstakin
A;Accession: 13938
A;Accession: 13938
A;Accession: 13938
A;Accession: 13938
A;Accession: 13938
A;Accession: 13938
A;Accession: 1395 ABSS
A;Cross-references: UNIPROT:P06578; GB:M37263; NID:g142885; PIDN:AAA22420.1; PID:g142886
C;Superfamily: parasporal crystal protein
C;Keywords: delta-endotoxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             12;
                                                                                         315

01-Nov-1998 (TrEMBLrel. 08, Last sequence update)
01-NAR-2004 (TrEMBLrel. 26, Last annotation update)
Insecticidal protein.
Name-cryv101;
Bacillus thuringiensis (subsp. kurstaki).
Plasmid large plasmid.
Bacteria; Firmicutes; Bacillales; Bacillaceae; Bacillus.
NCBI_TaxID=29339;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Curr. Microbiol. 41:65-69(2000).

-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithelial cells of many lepidopteran larvae. Active on Plutella xylostella and on Bombyx mori.

-!- DEVELOPMENTAL STACE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                between the Swiss Institute of Bioinformatics and the EMBL outstations by European Bioinformatics institute. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

                   Sequence 23, Application US/09826660

Patent No. US200100269401

GENERAL INFORMATION:

APPLICANT: Cardineau, Guy A.

APPLICANT: Cardineau, Guy A.

APPLICANT: Stelman, Steven J.

APPLICANT: Narva, Kenneth E.

TITLE OF INVENTION: Plant-Optimized Genes Encoding Pesticidal Toxins
FILE REFERENCE: MA-714XC2D1

CURRENT PILNG DATE: 1099/826,660

CURRENT APPLICATION NUMBER: US/09/826,660

FRIOR PILING DATE: 1998-10-23

PRIOR FILING DATE: 1998-10-23

PRIOR FILING DATE: 1997-11-12

PRIOR FILING DATE: 1997-11-12

PRIOR FILING DATE: 1997-11-12

PRIOR FILING DATE: 1998-03-02
